

FLOWSTER STUDIO

THE IT-AUTOMATION PLATFORM

PRODUCT DESCRIPTION

FLOWSTER Studio is an intelligent platform for automation and orchestration of IT processes in datacenters and cloud-infrastructures. With an approximate count of 2000 activities added to your existing IT-infrastructure, it is possible to handle an implementation in a fast and integrative way. It is also possible to graphically model new as well as individual workflow-solutions. Given all this, FLOWSTER Studio provides a high level of transparency and comprehensibility of automated solutions tackling your business challenges.

COMPONENTS

DESIGNER

Modelling of complex workflows via drag & drop

USER PORTAL

Self-generating Self-Service-Portal for workflows

AGENT

Execution of the specific workflows per security zone

ADMINISTRATOR

Administration of the platform and versioning of the workflows

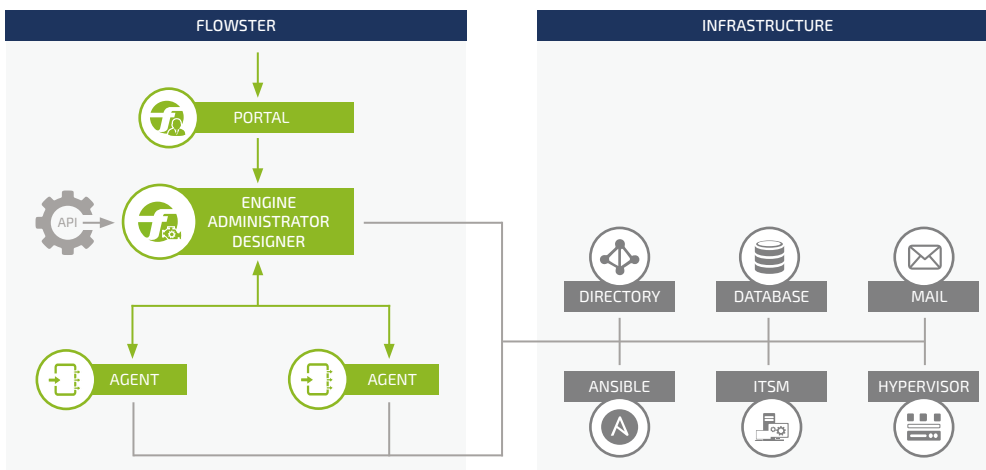

ENGINE

Operates as a centralized controller for all components of the platform

INTEGRATOR

Interface for third parties via web services and Rest-API

SYSTEM ARCHITECTURE

MAIN ADVANTAGES

- Fast integration within your existing IT environment through an extensive activity-library
- System-specific and cross-system workflow design
- Representation and integration of workflows on a User Portal
- Start of workflow initiated by professional departments themselves is possible
- Simple and fast modeling of complex workflows via drag & drop
- Prompt pre-tests and error recognition of workflows within the Designer
- Inegration of third party software-providers possible
- High availability and load balancing through multiple instances
- End-to-end automation and reporting on datacenter processes
- Flexible extension of specific components based on individual requirements

FIELDS OF APPLICATION

- DATACENTER AUTOMATION
- USER MANAGEMENT
- WORKPLACE AUTOMATION
- INCIDENT RESOLVING
- ITSM INTEGRATION
- MULTI CLOUD AUTOMATION
